DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 6-8 and 16-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 3934654 A1 in view of Scudder 3,274,322.

DE '654 discloses an elevator rope 5 comprising a plurality of load carrying members 12 (Figures 1 & 2) coated by a single, rectangular a cross section coating 11. DE '654 does not disclose a method of coating the rope.

Scudder discloses a method of coating a thermal polyurethane coating that does not contain wax. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the elevator rope of DE '654 utilizing the method of Scudder '322 in order to reduce time consuming and uncertain of results.

Response to Arguments

3. Applicant's arguments filed October 31, 2005 have been fully considered but they are not persuasive. The previous rejection stands.
4. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, utilizing the polyurethane forming technique of the Scudder would reduce the time consuming and uncertain (consistence) results for the elevator rope of German patent.

Art Unit: 3652

5. Applicant argues that the "sticky" polyurethane in the Scudder references, that is the material before it is fully cured when the material has not yet hardened, and that is not a teaching of a polyurethane without wax. On column 1, lines 30-56, Scudder discloses that in order to avoid the polyurethane adhere to the surface, applicant applies oily substance, or a thick film, over the layer of polyurethane prior to its being engaged by the second moving surface, so the belt can be removed from the surface. Since Scudder applies oily substance or a thick film over the layer of polyurethane. Thus, it can be reasonably interpreted that the polyurethane in Scudder does not include wax.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
